

MySpot 120 Hinged Lockable Post

MySpot™ 120 is an attractive, strong hinged post that restricts access to a parking space. The post is unlocked by using a key, and then placed on the ground to allow entrance to the space. The post self-locks when it is manually returned to the upright position.

The MySpot 120 is the only product of its kind to incorporate a *defense mechanism against accidental impacts*. If a force in excess of 30 Kg (60 lbs) is applied to the post, the post will yield. When the offending force is removed, the post will rebound to the upright position.

If a car forces the upright post *intentionally* and drives into the parking space, the post will lodge under the car and may cause damage to the undercarriage when the car pulls out.

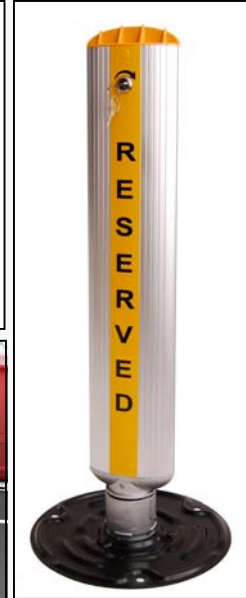

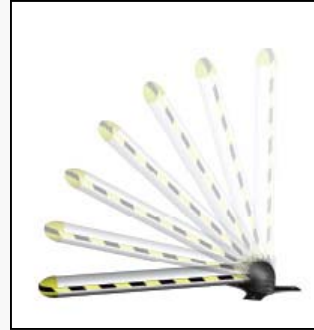

MySpot 120 is constructed using the highest grade, durable aluminum and steel. The unit is shipped completely assembled, ready to be glued or bolted to the parking surface. The kit includes 2 keys, a drill template and all the hardware required to anchor the unit to a concrete surface.

Applications

- Reserving designated parking spaces in garages, offices, shopping centers, hospitals, condominiums
- Blocking access to narrow streets and driveways
- Valet parking
- Handicap parking
- Parking lot management

Installation

Installation involves attaching the base of the post to the ground using the supplied 3 anchors and bolts. An optional anchor kit for mounting to asphalt surfaces is available, as is a special industrial-grade adhesive to glue the base directly to the surface.

MySpot 120 guards a parking space

| P/N | Pylon dimensions | Weight | carton | Warranty | Time to install |
|---------|------------------|--------|----------|-----------|-----------------|
